# 1. IPrinterService

# 1.1. Interface IPrinterService

**AIDL**: IPrinterService **JAR/AAR**: Printer

**Delphi**: Jprintermodule\_Printer

# 1.1.1. printerInit

# **Function description**

Inicialize device's printer
Only applicable for AIDL, internal-only for others

#### **Parameter list**

| Parameter | Туре             |
|-----------|------------------|
| callback  | IPrinterCallback |

#### Return

None

# 1.1.2. printTextWithAttributes

# **Function description**

Print formatted text

# **Parameter list**

| Parameter  | Туре             | Description               |
|------------|------------------|---------------------------|
| text       | String           | Input text to print       |
| attributes | Мар              | Attributes to text format |
| callback   | IPrinterCallback | Callback                  |

#### Return

#### **Example code:**

```
Map<String,Integer> maptext1 = new HashMap<String,Integer>();
maptext1.put(PrinterManager.KEY_LINESPACE,10);
maptext1.put(PrinterManager.KEY_TEXTSIZE,26);
maptext1.put(PrinterManager.KEY_TYPEFACE, 1);
maptext1.put(PrinterManager.KEY_ALIGN, 1);
maptext1.put(PrinterManager.KEY_MARGINLEFT, 0);
maptext1.put(PrinterManager.KEY_MARGINLEFT, 0);
printTextWithAttributes("Lorem ipsum dolor sit amet, consectetur adipiscing elit. Integer a neque magna", map1, mCallback);
```

# 1.1.3. printColumnsTextWithAttributes

# **Function description**

Print formatted columns text (table)

#### **Parameter list**

| Parameter  | Туре             | Description               |
|------------|------------------|---------------------------|
| text       | String           | Input text to print       |
| attributes | List             | Attributes to text format |
| callback   | IPrinterCallback | Callback                  |

#### Return

None

# **Example code:**

```
String[] row1Texts = {"Name","Lables","Counts","Money"};
String[] row2Texts = {"Apple","Iphone","1","6088"};

Map<String,Integer> attrColsMap = new HashMap<String,Integer>();

attrColsMap.put(KEY_LINESPACE,0);
attrColsMap.put(KEY_TEXTSIZE,20);
attrColsMap.put(KEY_ALIGN, 0);
attrColsMap.put(KEY_MEIGHT, 1);

Map<String,Integer> attrCols1Map = attrColsMap;
Map<String,Integer> attrCols2Map = attrColsMap;
Map<String,Integer> attrCols3Map = attrColsMap;
Map<String,Integer> attrCols3Map = attrColsMap;
Map<String,Integer> attrCols4Map = attrColsMap;
ArrayList<Map<String, Integer>> attrCols4Map = new ArrayList<Map<String, Integer>>();
attrRow.add(attrCols1Map);
attrRow.add(attrCols1Map);
attrRow.add(attrCols3Map);
attrRow.add(attrCols3Map);
attrRow.add(attrCols4Map);
printColumnsTextWithAttributes(row1Texts, attrRow, mCallback);
printColumnsTextWithAttributes(row2Texts, attrRow, mCallback);
```

# 1.1.4. printBitmap

# **Function description**

Print bitmap

# **Parameter list**

| Parameter | Туре             | Description           |
|-----------|------------------|-----------------------|
| Bitmap    | Bitmap           | Input bitmap to print |
| callback  | IPrinterCallback | Callback              |

#### Return

None

# 1.1.5. printBitmapWithAttributes

# **Function description**

Print bitmap with attributes

#### **Parameter list**

| Parameter  | Туре             | Description                 |
|------------|------------------|-----------------------------|
| Bitmap     | Bitmap           | Input bitmap to print       |
| attributes | Мар              | Attributes to bitmap format |
| callback   | IPrinterCallback | Callback                    |

#### Return

None

# **Example code:**

```
Bitmap logo_300x473 = new Bitmap();
Bitmap logo_410x490 = new Bitmap();

Map<String,Integer> map1 = new HashMap<String,Integer>();
map1.put(KEY_ALIGN, 0);
map1.put(KEY_MARGINLEFT, 5);
map1.put(KEY_MARGINRIGHT, 5);
printBitmap(logo_410x490,map1, mCallback);
printBitmap(logo_300x473,map1, mCallback);
```

# 1.1.6. printQRCode

# **Function description**

Print QRcode image

# Parameter list

| Parameter | Туре             | Description                                     |
|-----------|------------------|---|
| text      | String           | Input text to generate QRcode image             |
| align     | Integer          | Align atributes ex: [ 0:center 1:left 2:right ] |
| size      | Integer          | Size of QRcode image ex: [ 100(px) ]            |
| callback  | IPrinterCallback | Callback  |

# Return

None

# 1.1.7. printBarCode

# **Function description**

Print BarCode image

# Parameter list

| Parameter   | Туре             | Description                                     |
|-------------|------------------|---|
| content     | String           | Input content to generate BarCode image         |
| align       | Integer          | Align atributes ex: [ 0:center 1:left 2:right ] |
| height      | Integer          | BarCode height                                  |
| width       | Integer          | BarCode width                                   |
| showContent | Boolean          | Show content+image or only image                |
| callback    | IPrinterCallback | Callback  |

# Return

# 1.1.8. setPrinterSpeed

# **Function description**

Set printer speed level

#### **Parameter list**

| Parameter | Туре             | Description                         |
|-----------|------------------|-------------------------------------|
| level     | Integer          | Speed level; [lower 1 < < 6 faster] |
| callback  | IPrinterCallback | Callback                            |

#### Return

None

# 1.1.9. sendRAWData

# **Function description**

Send Raw data to printer mcu

# Parameter list

| Parameter | Туре             | Description |
|-----------|------------------|-------------|
| data      | byte[]           | Raw data    |
| callback  | IPrinterCallback | Callback    |

# Return

None

# 1.1.10. printerTemperature

# **Function description**

Get printer temperature

# Parameter list

| Parameter | Туре             | Description |
|-----------|------------------|-------------|
| callback  | IPrinterCallback | Callback    |

#### Return

| Return value | Description                    |
|--------------|--------------------------------|
| Intogor      | 0: Abnormal (temperature > 65) |
| Integer      | 1: Normal (temperature <=65)   |

# 1.1.11. printerPaper

# **Function description**

Get printer paper status

# **Parameter list**

| Parameter | Туре             | Description |
|-----------|------------------|-------------|
| callback  | IPrinterCallback | Callback    |

# Return

| Return value | Description        |  |
|--------------|--------------------|--|
| Boolean      | True: Detect paper |  |
| Boolean      | False: No paper    |  |

# 1.1.12. getFirmwareVersion

# **Function description**

Get firmware version

# Parameter list

# Return

| Return value | Description     |
|--------------|-----------------|
| String       | Frmware version |

# 1.1.13. getBootloaderVersion

# **Function description**

Get bootloader version

# **Parameter list**

None

# Return

| Return value | Description        |
|--------------|--------------------|
| String       | bootloader version |

# 1.1.14. upgradePrinter

# **Function description**

Upgrade printer bootloader and firmware *Deprecated, no use* 

# **Parameter list**

None

#### Return

None

# 1.1.15. printerReset

# **Function description**

Reset device's printer Deprecated, no use

# Parameter list

| Parameter | Туре             |
|-----------|------------------|
| callback  | IPrinterCallback |

#### Return

None

# 1.1.16. printerWrapPaper

# **Function description**

Test wrap paper at device's printer

# **Parameter list**

| Parameter | Туре             | Description   |
|-----------|------------------|---------------|
| n         | Integer          | Lines to wrap |
| callback  | IPrinterCallback | Callback      |

# Return

None

# 1.1.17. printText

# **Function description**

Simple print text

# Parameter list

| Parameter | Туре             | Description         |
|-----------|------------------|---------------------|
| text      | String           | Input text to print |
| callback  | IPrinterCallback | Callback            |

# Return

# 2. IPrinterCallback

# 2.1 Interface IPrinterCallback

AIDL: IPrinterCallback
JAR/AAR: PrinterCallback

Delphi: Jprintermodule\_PrinterCallback

# 2.1.1 on Exception

# **Function description**

Exception data

#### Parameter list

| Parameter | Туре    | Description       |
|-----------|---------|-------------------|
| code      | Integer | Exception code    |
| msg       | String  | Exception message |

#### Return

None

# 2.1.2 onLength

# **Function description**

Print length rounding values

#### **Parameter list**

| Parameter | Туре | Description                             |
|-----------|------|---|
| current   | Long | length of current word                  |
| total     | Long | total length of printing after power on |

#### Return

# 2.1.3 onRealLength

# **Function description**

Print length not rounding values (mm)

# Parameter list

| Parameter | Туре   | Description                             |
|-----------|--------|---|
| current   | Double | length of current word                  |
| total     | Double | total length of printing after power on |

# Return

None

# 2.1.4 onComplete

# **Function description**

Called when the given task completes

# **Parameter list**

None

# Return

# 3. Printer Broadcast

#### Class

android.content.BroadcastReceiver

#### Intent

"br.com.positivo.printer.onRealLength"

#### **Extras list**

| Name                | Туре   | Description                                  |
|---------------------|--------|--|
| onRealCurrentLength | Double | length of current print (mm)                 |
| onRealTotalLength   | Double | total length of printing after power on (mm) |

# Example code

Adding receiver in AndroidManifest.xml

#### Sample Broadcast

# 4. Printer Attributes

# 4.1 Align

#### Key

key\_attributes\_weight

# Supported by

print Text With Attributes, print Bitmap With Attributes

# **Values**

0 ... 2

#### **Default**

1 (left)

# **Reference values**

0 (center), 1 (left), 2 (right)

# Paper usage

N/A

# 4.2 Text Size

# Key

key\_attributes\_textsize

# Supported by

print Text With Attributes, print Columns Text With Attributes

#### **Values**

1 ... 32.767

# **Default**

24

#### **Reference values**

16 (FONT\_SMALL), 24 (FONT\_NORMAL), 36 (FONT\_LARGE)

# Paper usage

N/A

# 4.3 Type Face / Font

#### Kev

 $key\_attributes\_type face$ 

## Supported by

print Text With Attributes, print Columns Text With Attributes

# **POSITIVO Tecnologia**

# Printer

#### **Values**

0 ... 8

# **Default**

0

#### **Reference values**

- 0: default font
- 1: bold default font
- 2: serif default font
- 3: Arial
- 4: FangHei
- 5: Franklin Gothic
- 6: Haettenschweiler
- 7: HuaSong
- 8: Sans Mono

# Paper usage

N/A

# 4.4 Margin Left

# Key

key\_attributes\_marginleft

# Supported by

print Text With Attributes

# **Values**

1 ... 384

# **Default**

1

# **Reference values**

N/A

# Paper usage

- 1: 0,5 cm
- 10: 0,6 cm
- 20: 0,7 cm
- 30: 0,85cm
- 40: 0,95cm

# 4.5 Margin Right, Top and Bottom

# Currently, not supported

# 4.6 Line Space

# Key

key\_attributes\_linespace

# Supported by

printTextWithAttributes

#### **Values**

10 ... 32.767

# **Default**

10

# **Reference values**

N/A

# Paper usage

0,2 cm every 10. Space (cm) = 0,2 \* (value/10)

# 4.7 Weight

# Key

key\_attributes\_weight

# Supported by

print Columns Text With Attributes

# **Values**
